

QBR Sets the New Standard for Business Continuity. Accept Nothing Less.

The Difference

QBR provides companies with an **advanced insurance policy against data loss and costly downtime** by utilizing a revolutionary technology that dramatically simplifies the backup and recovery process. By employing proprietary Inverse Chain Technology, QBR eliminates the inherent inefficiency of the traditional backup chain. QBR takes data directly from the server and converts it into virtual machine readable files that can be booted instantly from a web interface or by using any common hypervisor. This innovative way of storing data allows for instant on-site and off-site recovery and can prevent businesses from having to experience downtime in the event of a disaster, offering the peace of mind that backups will be available at a moment's notice.

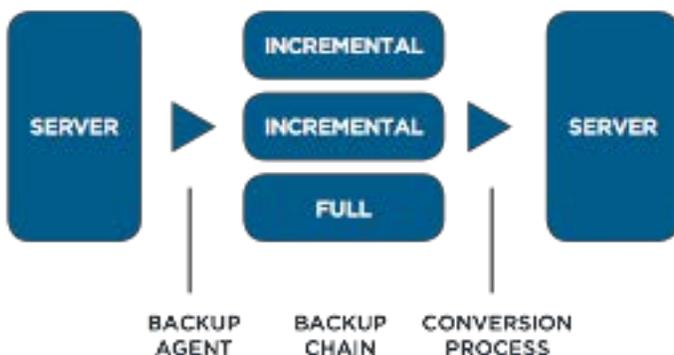

Screenshot Backup Verification

QBR leverages instant virtualization capabilities to provide the most advanced method of backup verification in the industry. By taking a screenshot of each completed boot process virtually, QBR tests backup integrity and proactively identifies boot-ability issues. Serving as evidence of a successful backup, the screenshot can be shared with end-users to ensure peace of mind that data can be recovered at a moment's notice.

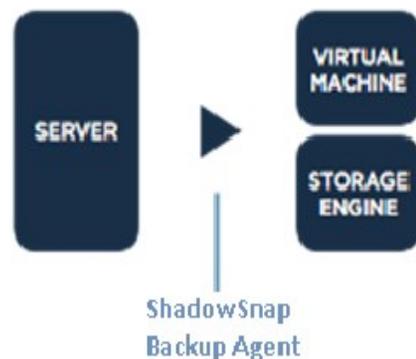

Break Free from the Chain

The QBR backup process eliminates the area where most problems arise in the traditional backup process: the backup chain. QBR takes data and converts it directly into a virtual machine each time a backup occurs. The most recent backup image is always the base image and does not rely on past incrementals to restore data. Since each backup is a fully bootable virtual machine, there is no need for a conversion to occur before performing a restore. With no complicated rollup or restore processes, data is always available immediately both on-site and off-site.

TRADITIONAL BACKUP PROCESS

QBR SIMPLIFIED BACKUP PROCESS

Instant Virtualization On-Site and Off-Site

In just seconds, backups can be virtualized either locally on the powerful QBR appliance or remotely in a secure cloud. The advanced web interface allows for configuration of CPU and memory resources. Network resources can be configured dynamically, allowing for changes to be made without restarting the virtual machine. Even while virtualized, systems can continue to back up to the QBR appliance and the cloud.

Future Ready

QBR appliances support the latest standards and are continuously being updated. Every QBR appliance supports software RAID and 2TB+ Volumes including advanced format drives. QBR appliances also support GPT Partition formats including those using EFI Boot. QBR is capable of backing up both physical and virtual systems with nearly any storage configuration. All QBR appliances regularly download and install updates in the background, ensuring that every device is always running the latest version.

Centralized Management

All appliances are controlled through an easy to use central web interface. This interface allows for quick access to critical stats and has detailed remote management ability. Through the interface it is possible to virtualize a failed server on an appliance that may be hundreds of miles away with just a few clicks. The interface even allows you to gain RDP access to remote servers and VMs through a secure VPN connection.

Broad Operating System Support

The Namtek QBR Supports the widest array of operating systems of any BDR Product on the market. With support for Windows 2000, XP, 2003, Vista, 2008 and 7, QBR supports almost any Windows system still in production today.

Better Bare Metal Restore

QBR devices use a completely unique method for performing bare metal restores. Rather than use a limited restore environment that fits on a single CD, QBR supports network BMR. The QBR Device acts as a network boot server allowing the destination system to be booted using PXE Boot (Common on almost all systems newer than 2001). QBR also supports restoring to smaller volumes, a feature absent in many products

Product Specifications

	QBR-G	QBR-L	QBR-S
On-Site Backup	Yes	Yes	Yes
Off-Site Backup	Yes	Yes	Yes
Bare Metal Restore	Optional	Yes	Yes
Data De-duplication & Local Compression	Yes	Yes	Yes
Secure Linux Based OS	Yes	Yes	Yes
ZFS Snapshots	Yes	Yes	Yes
Message-Level Exchange Recovery		Yes	Yes
Granular SharePoint Recovery		Yes	Yes
Advanced File Level Restore		Yes	Yes
Instant Off-Site Virtualization		Yes	Yes
VMDK/VHD Export		Yes	Yes
Instant On-Site Virtualization			Yes
Screenshot Verification of Backups			Yes
