WIMS 2.0

Wireless Inventory Management Solution

In today's competitive business environment, it's essential for manufacturers and distributors to operate as efficiently as possible to ensure excellent customer service, smooth, error-free operations and cost reductions. Wireless data collection applications and sophisticated inventory control systems are key to any successful manufacturing business.

Now, small and medium size businesses can say goodbye to manual spreadsheet-based tracking or offline recording systems and use our affordable, real-time inventory data collection system, [Wireless Inventory Management Solution \(WIMS 2.0\)](#).

WIMS 2.0

About

WIMS is a software solution developed and conceived internally at NAMTEK Consulting Services, based on years of experience in the warehousing and distribution space.

WIMS 2.0 revolutionizes the field of mobile data collection. This second edition Warehouse Management system delivers the latest in technology, with SOAP protocol and XML, so that any business can securely maximize processes outside the company's four walls.

WIMS 2.0 comes with increased performance and security as well as ease of use and quick integration.

Whether scanning from within a LAN or WLAN, the time to transmit data does not exceed 850 milliseconds even though the packets of data are now embedded with 2 layers of security.

Features

- Real-Time Processing
- Multi-Warehousing Capability
- Merchandise Tracking (by Location, by SKU and Lot #)
- Bin Location Management
- Receiving
- Units/Boxes Movement
- Physical Inventory Count
- Bilingual User Interface (English, French)
- Web-Based Control Panel
- Employee Productivity Tracking
- Customizable to your specific business needs
- Easy Integration with ERP and Enterprise Information Systems

Benefits

- Real-time inventory tracking
- Reduce operating expenditures while bolstering the caliber of customer service
- Increase worker productivity and efficiency
- Keep costs down and move inventory faster
- Shorten fulfillment lead times
- Streamline inventory management
- Eliminate manual data entry for faster data collection
- Increase data accuracy
- Ease of data access by using wireless portable data terminals
- Accommodates most industries and verticals
- Ability to easily and quickly accommodate to changes in business rules
- Ease of use, thus reducing employee training
