What is EDI2XML Web Services?

EDI2XML Web Service, is an HTTP service running over the internet, on EDI2XML private cloud platform that is capable of receiving HTTP requests to translate EDI messages to XML, and XML messages (based on EDI2XML's proprietary format) to EDI.

Who is it for?

EDI2XML Web Service, is for developers and businesses, interested in building their own EDI (Electronic Data Interchange) integration flows and programs. Normally, these individuals, are capable of interacting with external API and Web Services to translate EDI to XML and XML to EDI, and have the resources and expertise to work with Web Services and HTTP requests in order to achieve their goals. EDI2XML web service, is the premier choice for IT people as a reliable service to accomplish such integration projects.
